INTERNATIONAL WORKSHOP

NAPLES | 4TH - 5TH JUNE 2020

Hotel Royal Continental

State of the Art
**in PRECISION
MEDICINE**

RATIONALE

Precision medicine is one of the most modern and effective approaches in the prevention and treatment of serious illnesses such as cancer, neurodegenerative and cardiovascular diseases and more recently chronic respiratory diseases.

“Our goal is reliable and timely diagnosis and effective targeted therapy as well as a radical reduction in drugs overuse and patient distress. According our approach, it is important to note that the high efficiency of personalized medicine can contribute to a significant reduction in health care costs. Moreover, the network is part of a strategic plan with a long term perspective; beyond the significant social dimension, it will offer a unique opportunity for growth by opening up possibilities for synergies between national and EU funding instruments.”

Our ambition is to organize the State of the Art in Precision Medicine in Respiratory diseases in order to announce the novel advances in this exciting field in European cities in June every year.
